01 Essential Tools:

Item	Tool Description
01	Metal drill, dia. 3.8mm (for pilot holes for self-tapping screws) SUPPLIED
02	Driver Bit, Phillips Head, PH2 (for driving the self-tapping screws) NOT Pozidriv. SUPPLIED
03	51mm Holesaw.
04	10mm Socket (for tightening M6 Nyloc Nuts).
05	Ratchet Driver for 10mm socket (item 04).
06	Spirit Level.
07	Power Drill/Driver, Hammer Drill (ideally cordless).
08	13 Amp Extension cable.
09	Marker Pen.
10	Soft Lead pencil.
11	Robust Step Ladder(s).
12	Digging Equipment for Supporting Post foundation holes.
13	Hacksaw.

02 Tools that will make installation easier:

Item	Tool Description
01	Sliding Compound Mitre Saw, 250mm dia.
02	Mitre Saw Bench.
03	Power Drill/Driver, SDS Drill – cordless.
04	Folding Saw Horses/Trestles.
05	Cement Finishing Trowel.
06	Power Jig Saw – cordless.
07	White Rubber Mallet.
08	Variety of metal drills.
09	Variety of Masonry drills.
10	Metal File.

03 Items to be supplied by Installer

Item	Item Description
01	Fixings to secure Wall Plate – usually masonry fixings
02	Drill bits for fixings in 01
03	Fixings for securing Supporting Post Feet.
04	Drill bits for fixings in 02
05	Sand and cement/ post mix and water for supporting post foundations (if this is the foundation regime for the posts).

05 Overview of Installation Process (Main Stages):

Stage	Stage Description
01	Set out and dig holes for foundations for supporting posts (or, mark out locations for supporting posts if posts to be fixed using masonry fixings to fix to base. Make hole(s) for egress of rainwater in Supporting Post(s) where this is required. (This is not required if Supporting Posts are not to be secured by burying them in a concrete foundation).
02	Prepare and fix wall-plate (Ensuring alignment with supporting post positions).
03	Prepare Eaves/gutter – insert set screws into channels on Eaves/Gutter, fit brackets (one per post at this stage) in required position. Make hole(s) for rainwater drainage in Eaves/Gutter immediately above and central to Supporting Post(s) where rainwater drainage is required
04	Install Eaves gutter onto supporting posts. Make sure that your levels are as required at this stage.
05	Install and secure both Edge Glazing Bar assemblies (Edge Glazing Bars with Edge Glazing Bar End Caps fitted) at either end of the canopy. This will provide the canopy framework. Final Check of levels. Secure all brackets at the supporting post and Eaves/Gutter Joints.
06	Fit Roof Panels and Main Glazing Bar assemblies (Panels fitted with F Sections, Main Glazing Bars with Main Glazing Bar End caps fitted). Working from one end of the canopy fit one roof panel assembly followed by one Main Glazing Bar assembly alternatively until the last roof panel is to be fitted. Undo the self-tapping screw securing the Edge Glazing Bar at the Eaves/Gutter to enable the last roof panel to be fitted. Re-secure Edge Glazing Bar.
07	Secure the Main Glazing Bars in position at the Wall-Plate and the Eaves/Gutter. Check Spacing between Glazing Bars is correct against positions marked earlier.
08	Applying Silicone Bead to Top of F Section/Glazing Panel Junction.
09	Installing Knee Braces (if fitted) between Eaves/Gutter and Supporting posts.
10	Secure the Supporting Post feet in position by the means that you have chosen. The recommendation is that the supporting posts feet are buried in minimum 300mm cube of concrete.

 16mm structured polycarbonate

Page 12 of 56

06 Installation Process; Main Stages in Detail:

Process Step	Description
	<u>Stage 01: Set Out positions and prepare foundations for Supporting Posts</u>
01	<p>Mark position of each Supporting Post. When undertaking this task be sure that you are aware of the position of the wall.</p> <p>In most cases, but, not all, the Supporting Posts will be evenly spaced along the length of the Eaves/Gutter with the (2) outside Supporting Posts aligned with either end of the Eaves/Gutter.</p> <p>Post hole positions shown for standard canopies on Page 42.</p>
02	<p>Dig holes for each Supporting Post.</p> <p>These holes should be a minimum of 300mm square x 400mm deep.</p> 
03	<p>Pour concrete mix into each hole to a depth of 100mm to provide footing for Supporting Post Feet.</p> <p>Concrete mix should ideally be: 1part cement: 3.5 parts sand: 2.5 parts coarse aggregate.</p> <p>If using combined aggregate the mix should be: 1part cement: 5 parts combined aggregate.</p> <p>Do not overwater as the mix needs to start 'skinning over' as soon as possible.</p> <p><i>This can be accelerated by pouring a thin layer of cement onto the concrete footing once it has been levelled.</i></p> <p>Level the footing using a Cement Finishing Trowel.</p> 

Document: Installation Guide

Guide No: 015

Description: Omega Canopy, Lean-To Style, Post-Supported,
16mm structured polycarbonate

Page 13 of 56

04	<p>Fit the Supporting Posts with the Supporting Post Feet. Each post has (2) Supporting Post Feet attached to one end. Set out the Supporting Post on trestles so that you are working at waist height. Insert a Post Foot into the inside of the Supporting Post. The Post Foot will slide into the channels on the inside of the Post. There is a step on the Post Foot. When the Foot is pushed home the Post Foot step will abut the end of the Post.</p> 
----	--

Document: Installation Guide
 Guide No: 015
 Description: Omega Canopy, Lean-To Style, Post-Supported,
 16mm structured polycarbonate

Page 14 of 56

05	<p>Secure the Post Foot to the Supporting Post. With the Post Foot located in the Supporting Post drill (2) pilot holes using the 3.8mm drill, one above the other, (roughly on the centre-line of the Supporting Post) through the Supporting Post and through the Post Foot located inside the Supporting Post. When drilling the Pilot Hole, do not apply undue downward pressure as this will potentially break the drill. <i>As you will be drilling several Pilot Holes you will get used to the appropriate pressure to apply.</i> Secure the Post Foot in position using the Phillips Head Self-Tapping Screws using the PH2 Driver Bit. When driving the Self-Tapping Screw you will need to apply sufficient pressure so that the drill bit does not slip out of the screw head. <i>You will need a medium-to-high torque setting on your Drill/Driver in combination with applying pressure on the self-tapping screw.</i> <i>Again, this will be a technique that you will get used to and learn the correct settings that work for your installation.</i></p> <div data-bbox="391 1184 1332 1532">  </div>
06	Repeat Process Steps 04 – 05 for the other foot for the same Supporting Post.
07	Repeat Process Steps 04 -06 for each Supporting Post.

Document: Installation Guide

Guide No: 015

Description: Omega Canopy, Lean-To Style, Post-Supported,
16mm structured polycarbonate

Page 15 of 56

08	<p>Cut rainwater drainage hole in Supporting Post(s). The hole is cut using a hole-cutter and Power Drill/Driver. Make sure that the hole is at the correct depth (the Supporting Post is being buried in concrete). Make sure that the hole is on the correct face of the Supporting Post(s) so that the rainwater flows out of the hole in the correct direction.</p> <div data-bbox="395 710 852 1055"></div> <div data-bbox="876 710 1331 1048"></div>

 16mm structured polycarbonate

Page 16 of 56

	<u>Stage 02: Prepare and Fix Wall-plate</u>
09	<p>Drill holes in the Wall-plate so that the fixings that are to be used to secure the wall-plate can be accommodated. This is most easily achieved with the wall-plate located on trestles to allow waist height working. We cannot be specific with regard to the fixings that you should use. The fixings that you use should be appropriate for the vertical surface/material against which the wall-plate is to be fixed. We recommend that the fixings should be spaced no more than 450mm apart. The vertical location of the fixings should be as close as possible to the top slot profile that runs the length of the wall-plate (if the fixing is to be fitted above this slot). This is probably the best position for the hole for the fixings as it allows the best access to the fixing when securing the fixings. If the fixing is to be installed below this slot the only consideration is the ease of access when installing the fixing.</p> 

Document: Installation Guide
 Guide No: 015
 Description: Omega Canopy, Lean-To Style, Post-Supported,
 16mm structured polycarbonate

Page 17 of 56

10	<p>Install Wall-Plate End-Plates onto the ends of the Wall-Plate whilst Wall-Plate still resting on Trestles. Remove any protective film from the End-Plates. Using a Power Drill/Driver and PH2 Driver Bit screw the Self-Tapping Screws into the screw ports on the Wall-Plate to secure the End-Plate. The holes in the End-Plate align with the screw ports in the Wall-Plate:</p> 
<p><u>11</u> <u>(11a-11d)</u> 11a</p>	<p><u>This process step is <i>only</i> required if the wall-plate is supplied in (2) sections.</u> <u>This will be the case for canopies that are 6.3m (and over) in width.</u></p> <p>The aim of this process step is to align (the) (2) wall-plates with each other. This is not always necessary as it is often possible to achieve good alignment without using the joining plate.</p> <p>Insert Joining Plate into joining plate slots on one of the wall-plates. This is most easily achieved with the wall-plate resting on trestles at waist height. The Joining Plate is 350mm in length and is designed to be a tight fit. To make fitting the joining plate easier the edges of the Joining Plate can be filed using a Metal File. The joining plate can also be cut down in length using a Hack Saw, again to make fitting easier.</p> <p>Use a White Rubber Mallet to tap in the Joining Plate into the joining plate slots to half its length.</p> 

Document: Installation Guide

Guide No: 015

Description: Omega Canopy, Lean-To Style, Post-Supported,
16mm structured polycarbonate

Page 18 of 56

11b	Install the Wall-Plate with the inserted Joining Plate as in Process Steps 10 – 17.	
11c	<p>Install the other Wall-Plate.</p> <p>This will mean that this Wall-Plate will need to be presented to the Joining Plate and pushed onto the Joining Plate.</p> <p>This is achieved using (2) persons.</p> <p>One at the Joining Plate to ensure alignment and that the Joining Plate engages correctly with the joining plate slots in the 'new' Wall-Plate.</p> <p>The other person is located at the other end of the Wall-Plate and can tap the Wall-Plate onto the Joining Plate using a White Rubber Mallet to tap the wall-Plate at this end.</p>	
11d	This Wall-Plate can now be fixed in position by following Process Steps 10 – 17.	
12	<p>Present the wall-plate to its fixing location.</p> <p>Mark the hole positions for the fixings using the holes drilled in the wall-plate.</p> <p>Ensure the wall-plate is level when marking the hole positions by using a spirit level.</p>	 <p>This is most easily achieved as a 2-person activity.</p>

Document: Installation Guide
 Guide No: 015
 Description: Omega Canopy, Lean-To Style, Post-Supported,
 16mm structured polycarbonate

Page 19 of 56

13	Mark one of the (2) outermost hole positions first. Drill the fixing hole into the fixing surface using a Cordless Power drill/driver .
14	Fix the wall-plate using this first hole by partially fitting the first fixing.  <p>Raise the wall-plate into a horizontal position (checking the spirit level) and mark the other outermost fixing position.</p>
15	Fix the wall-plate in position by partially securing the fixing in this hole position.
16	Mark all the other hole positions.
17	Drill all the remaining fixing hole positions into the fixing surface. This will require that the wall-plate is completely removed to drill these holes.

16mm structured polycarbonate

Page 20 of 56

18	<p>Apply (2) thick (8mm) parallel beads along the length of the wall-plate. This is most easily achieved with the wall-plate resting on trestles at waist height.</p>	
19		<p>Re-present the wall-plate and fixing all required wall-plate fixings. This is a final fixing.</p>

Document: Installation Guide

Guide No: 015

Description: Omega Canopy, Lean-To Style, Post-Supported,
16mm structured polycarbonate

Page 21 of 56

	<u>Stage 03: Prepare Eaves/Gutter</u>
20	<p>Insert the required number of Set Screws into both Set Screw slots located on the underside of the Eaves/Gutter. This is most easily achieved with the Eaves/Gutter upside down on trestles. These are used to secure the Eaves/gutter to Supporting Post joint. Each bracket uses (4) Set Screws. The End Supporting Posts (at each end of the Eaves/Gutter employ (1) bracket. The intermediate Supporting Post(s) employ (2) brackets. Ensure that each Set Screw channel has the same quantity of Set Screws inserted and that this quantity is even.</p> <div data-bbox="418 934 858 1261">  </div> <div data-bbox="901 934 1345 1265">  </div>

Document: Installation Guide
 Guide No: 015

 16mm structured polycarbonate

Page 22 of 56

<p>21</p>	<p>Install Supporting Post/Eaves Gutter Brackets into Eaves Gutter. This should be undertaken whilst the Eaves/Gutter is still located on the Trestles. The aim here is to secure one bracket in position for each Supporting Post. Note that: End Supporting Posts require only one Bracket and this is located on the inside face of the End Supporting Post(s). Intermediate Supporting Posts require (2) Brackets; (1) either side of the post along the Eaves/Gutter.</p> <div data-bbox="418 801 855 1131" data-label="Image">  </div> <div data-bbox="887 801 1318 1122" data-label="Image">  </div> <p>In order that (1) Bracket for each Supporting Post is secured in position you will need to measure where the Posts will be located along the Eaves/Gutter and mark these positions before securing these single Brackets in position on the Eaves/Gutter. The Brackets that are required for the intermediate Supporting Posts can be loosely secured so that they move freely along the Eaves/Gutter. (This allows the Supporting Posts to be easily fitted to the Eaves/Gutter and Brackets when this process step is undertaken).</p> <p>The Brackets are secured via the M6 Set Screws located in the Set Screw channels. Locate the Bracket in the Eaves/Gutter so that each of the (4) Set Screws is located through the (4) drill holes in the Bracket. (This can be a little fiddly!)</p> <div data-bbox="826 1496 1340 1877" data-label="Image">  </div>

	Stage 05: Fit Edge Glazing Bars
32	<p>Fit the Edge Glazing Bars; one to each end of the canopy.</p> <p>There is flexibility along the length of the Edge Glazing Bar in the exact position the Edge Glazing Bars are secured to the Wall-Plate at one end of the Edge Glazing Bar and the Eaves/Gutter at the other end.</p> <p>The Standard projections of the canopy are achieved with the position of the Self-Tapping Screw located: 18mm from the end of the Edge Glazing Bar at the Eaves/Gutter. 42mm from the end of the Edge Glazing Bar at the Wall-Plate.</p> <p>Please note that these are nominal positions and you do have flexibility in the exact positioning of the Self-Tapping Screw fixings on the Edge Glazing Bar.</p> <p>When you are happy with the position of the Self-Tapping Screw and have secured the Edge Glazing Bar in position you may want to make a small block (of wood) to act as a locating device for the other Edge Glazing Bar and the Main Glazing Bars.</p> <p>This block is referred to as the Glazing Bar Setting Block later in this Installation guide.</p> <p>This block would sit in the Eaves/Gutter abutting the inside edge of the Eaves/Gutter and the end of the Edge Glazing Bar.</p> <p>You may use another wood block for the Wall-Plate end of the Edge Glazing Bar.</p> <p>Check your levels again.</p> <p>Secure the Edge Glazing Bar in position using (2) Self-Tapping Screws; (1) at the Eaves/Gutter end and (1) at the Wall-Plate end.</p> <div data-bbox="405 1384 801 1680">  </div> <div data-bbox="876 1384 1287 1680">  </div> <div data-bbox="405 1709 801 1998">  </div> <div data-bbox="887 1709 1287 1998">  </div>

34

Starting at one end of the canopy.

Remove the protective file from the periphery of both sides of the polycarbonate panels.

Make sure that the panel is in the correct orientation:

1. Top side of panel facing upwards (this will be the side of the panel with the protective film with the writing on it).
2. The end of the panel with the breather tape fitted is located at the Eaves/Gutter side of the canopy.

Slide the panel into the pocket of the Edge Glazing Bar.

Slide the Main Glazing Bar (pocket) onto the other side of the roof panel.

Rest this Main Glazing Bar on the Eaves/Gutter and Wall-Plate.

Locate the **Glazing Bar Setting Block** (described in process step 32) at the end of the Main Glazing Bar so that the Main Glazing bar is in position and aligned with the Edge Glazing Bar.

<p>34 (Cont'd.)</p>	<p><u>Laterally locating Glazed Panel Assembly and Main Glazing Bars:</u></p> <p>At the Eaves/Gutter; the Glazed Panel Assembly is located by the F Section 'Butting-Up' to the Glazing Bar edges. At the Wall-Plate the location is achieved by measuring the Gap between the Glazing Bars.</p> <p>For standard width canopies use the 'Between Glazing Bar' Dimensions in Section 07 of this guide. For Special Canopies use the 'Between Glazing Bars' dimension supplied in the Installation Guide Special Addendum – Glazing Bar Spacing.</p> <p><u>Process Steps for Installing Glazing Panel Assemblies and Main Glazing Bars</u></p> <ol style="list-style-type: none"> 1. Starting at one end side of the canopy install the first Glazing Panel Assembly. 2. Then, install the first Main Glazing Bar. 3. Repeat 1. and 2. until the last Main Glazing Bar is installed. 4. Check and adjust positioning of Main Glazing Bars laterally at the Wall-Plate and Eaves/Gutter. 5. Check Last Glazing Bar position at The Eaves/Gutter using the Setting Block. 6. Secure Last Glazing Bar in position with 1 self-tapping screw at the wall-Plate and 1 the Eaves/Gutter. 7. Remove the self-tapping screw at the Eaves/Gutter of the Edge Glazing Bar and 'swing' the Edge Glazing Bar out (pivoting at the Wall-Plate). 8. Install the last Glazing Panel Assembly. <p>'Re-screw' Edge Glazing Bar at Eaves/Gutter.</p> <div data-bbox="416 1541 1321 2029"> <p>Inserting first Glazing Panel Assembly</p>  </div>

	Stage 09: Fitting Knee Braces to Eaves/Supporting Posts (This stage only required if canopy is fitted with Knee Braces)
37	<p>The assembly process here is the same for securing all Knee Braces in position.</p> <p><u>Locate the Knee brace in position:</u> Ensure that the knee brace sits within the (2) flange profiles on the Eaves/Gutter and also sits over the Knee Brace Bracket on the Supporting post.</p> <p>The Knee Brace is supplied with the pilot holes for securing the Knee Brace to the Knee Brace Brackets pre-drilled. Before any drilling for pilot holes in the Eaves/gutter is undertaken ensure that the end of the Knee Brace with the pre-drilled pilot holes is located at the knee Brace Bracket.</p> <p>Ensure that the Knee Brace is located so that both end of the Knee Brace are located flush to the Eaves/Gutter and the Supporting Post.</p> <p><u>Securing Knee Brace:</u></p> <ol style="list-style-type: none"> 1. Secure the Knee Brace in position by driving (1) Self-Tapping screw through one of the pre-drilled holes in the Knee Brace into the Knee Brace Bracket. 2. Next drill a pilot hole through the Eaves/Gutter into the Knee Brace and secure by driving a self-tapping screw into the Knee Brace. 3. Repeat these (2) steps on the other side of the Knee Brace. 4. Drill remaining (2) pilot holes in the Eaves/Gutter. 5. Drive remaining (4) self-tapping screws.

09 Care and Maintenance

Your Omega canopy will require very little care and maintenance.

The metalwork is powder coated in polyester. This is very hard-wearing.
The roof panels are formed in polycarbonate. This is 200 times stronger than glass and is highly impact resistant.

Cleaning

1. The metalwork can be cleaned with a soft cloth and soapy water.
2. The (polycarbonate) roof panels can be cleaned:
 - a. Gently wash sheet with a solution of mild soap and lukewarm water, using a soft, grid-free cloth or sponge to loosen any dirt or grime.
 - b. Fresh paint splashes, grease and smeared glazing compounds can be removed easily before drying by rubbing lightly with a soft cloth using petroleum ether (BP65), hexane or heptane. Afterwards, wash the sheet using mild soap and lukewarm water.
 - c. Scratches and minor abrasions can be minimised by using a mild automobile polish. Test on a small area of sheet before using on the entire sheet is recommended.
 - d. Finally, thoroughly rinse with clean water to remove any cleaner residue and dry the surface with a soft cloth to prevent water spotting.

Other important instructions for (polycarbonate) roof panels:

1. Never use abrasive or highly alkaline cleaner on polycarbonate materials.
2. Never use aromatic or halogenated solvents like toluene, benzene, gasoline, acetone or carbon tetrachloride on polycarbonate materials.
3. Use of in with polycarbonate sheet can cause structural and/or surface damage.
4. Contact with harsh solvents such as methyl ethyl ketone (MEK) or hydrochloric acid can result in surface degradation and possible crazing of polycarbonate sheet.
5. Never scrub with brushes, steel wool or other abrasive materials.
6. Never use squeegees, razorblades or other sharp instruments to remove deposits or spots.
7. Do not clean polycarbonate in direct sunlight or at high temperatures as this can lead to staining.
8. For all mentioned chemicals consult the manufacturers' material safety data sheets for proper safety precautions.
